

Obsolescence announcement for Broadband Seismometer STS-2

Pfungen, Switzerland – January 2019

Streckeisen is announcing End-of-Life of the Broadband Seismometer **STS-2**. Streckeisen decided to discontinue STS-2 a number of years ago and decided to stop any repairs effective **January 1, 2019**.

Support on this product is continued but limited to remote help by email. Cables and host boxes available upon further notice.

Streckeisen recommend the Broadband Seismometer STS-2.5 as a direct replacement, which offers same performance, more robustness, less susceptibility to pressure variation, and easier centering.
